

ISM Basic Course

Ensuring Ship Integrity through working Management Systems

Today there is an increasing need for high quality shipping companies. There is a demand for competent crew, adequate maintenance, and smooth operations of the ships avoiding accidents and incidents. This can only be obtained through improved management systems developed by knowledgeable individuals.

In order to meet these needs, DNV has developed this course that combines both an overview to the main elements of the ISM code and also key factors for the successful implementation and typical pitfalls. It is intended both as an introduction for newcomers but also as a refresher. The content of the course is in line with the Guidance for IACS Auditors to the ISM Code, to enhance compliance with the requirements for safety and pollution prevention within shipping companies and on board their vessels.

Target group

Personnel in Shipping Companies who are involved in development and implementation of Safety Management Systems as well as,

- > Masters
- > Chief Engineers
- > Chief Officers
- > 2nd/3rd Mates
- > Technical Managers

Training objective

Participants will get a sound understanding of the principles and objectives behind the ISM Code and the ability to implement SMS within the Company and the Ships.

ISM Basic Course

Ensuring Ship Integrity through working Management Systems
